PRACTICAL -10

Create an HTTP server using Node.js which handles requests on port 10000 or a free port beyond 10000. Modify the server in such a way that opening localhost:10000 will display "Hello world, This is my Node.js server" on the browser.

Javascript file

```
Node > prac10.js > ...
  1    var http = require("http");
  2    http
  3      .createServer(function (req, res) {
  4        console.log("Listening on port 10000");
  5        res.writeHead(200, { "Content-Type": "text/html" });
  6        res.write("Hello World!");
  7        res.end();
  8      })
  9      .listen(10000);
 10
```

OUTPUT :

```
> practicle10@1.0.0 start
> node prac10.js

Listening on port 10000
Listening on port 10000
```

Hello World!
